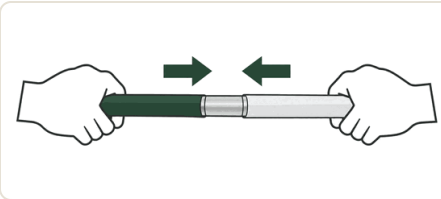
Teardrop flag

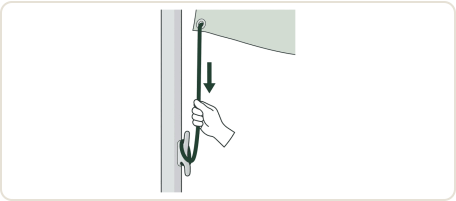
Every teardrop flag size uses the same steps. Your kit has the ground stake or the X base with water bag, whichever you chose.

1. **Check the parts:** pole sections, plus the X base bars, spigot and water bag, or the ground stake.

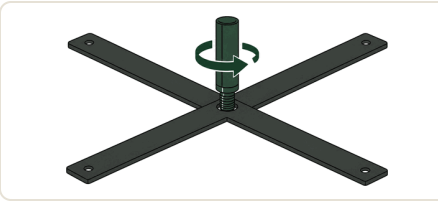


2. **Join the poles.** Push the sections together, the thin flexible section at the top.

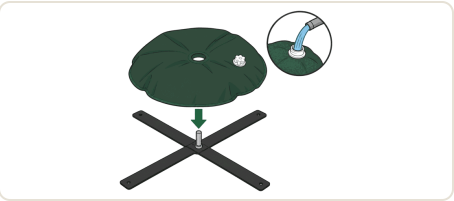
3. **Put the flag on.** Slide the pole up into the teardrop flag's pole pocket until the top section bends into the curve.



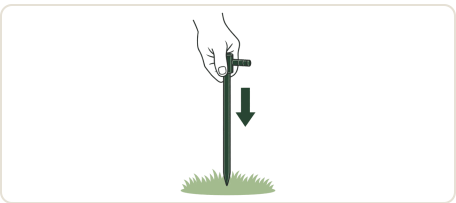
4. **Tension it.** Pull the cord at the bottom of the flag down and hook it near the bottom of the pole.



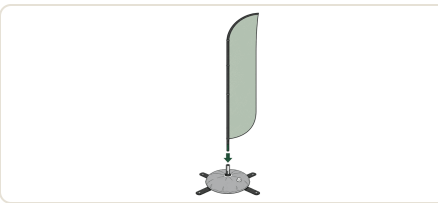
5. **Hard ground:** cross the two base bars into an X and screw the spigot into the center.



6. **Weigh it down.** Slide the water bag over the spigot onto the X and fill it with water through the cap.



7. **Soft ground:** push the ground stake straight down into the grass or soil instead of using the X base.



8. **Stand it up.** Lower the bottom of the pole onto the spigot. The flag turns with the wind.

GOOD TO KNOW

- Use the ground stake on grass or soil, and the X base with its water bag on concrete, pavement or indoor floors.
- The flag is rated for wind of about 18 to 23 mph. Take it down in stronger wind.
- Poles and base pack into the carry bag.

CARE

- Wash by hand, or on a gentle machine cycle, in cool water with a mild detergent.
- Hang to dry, and make sure the flag is dry before you store it.
- Do not use bleach.
